PACKET TRACER TOOL INSTALLATION AND USER INTERFACE

Aim:

To study the packet tracer tool installation and user interface overview.

PROCEDURE:

1. From the network component box, click and drag and drop the below components:

a) 4 Generic PCs and one HUB.

b) 4 Generic PCs and one Switch.

2. Click on connections:

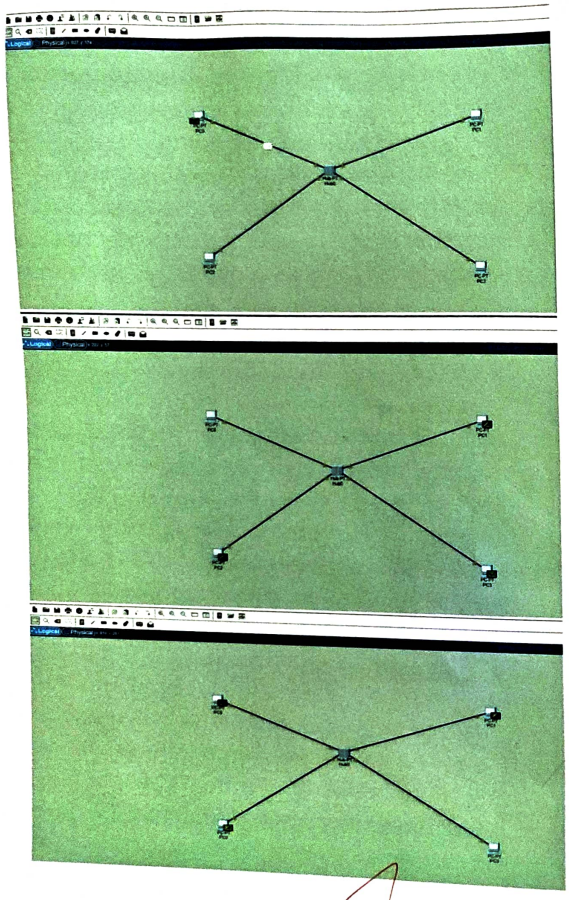

a) Click on Copper Stright Through Cable.

b) Select one of the Pc and connect it to HUB using the cable. The link LED should glow in green indicating that the link is up.

3. Click on the PCs connected to the HUB, go to the Desktop tab. Click on IP configuration and enter an IP address and subnet mask. Click on the PDU (message icon) from the common tool bar.

a) Drag and drop it on one of the PC (source machine) and then drop it on another PC (destination machine) connected to the HUB

4) Observe the flow of PDU from source Pc to destination Pc by selecting the Real time mode of Simulation.

5. Repeat step 3 to step 5 for the PCs connected to the Switch.

6. Observe how HUB and Switch are forwarding the PDU and write your observation and conclusion about the behaviours of Switch and HUB

WORKING OF HUB

1. A hub is a physical layer networking device that simply receives and forwards data.

2. Whenever one PC sends data, the hub broadcasts the data to all connected devices.

3. Every connected computer receives the frame, but only the destination computer accepts it while the others ignore it

4. Since all devices share the same communication channel, collisions are more frequent, resulting in lower network performance.

Result:

Thus, the Study of packet tracer tool installation and user interface overview was successfully executed and implemented.
