CONFIGURATION OF A LAN USING A SWITCH AND ETHRNET CABLES.

Aim:

To Setup and configure a LAN (Local area network) using a Switch and Ethernet cables.

LAN:

A local area network (LAN) refers to a network that connects devices within a limited area, such as an office building school or home. It enables user to share resources, including data, printers and internet access.

PROCEDURE:

1. Plan and design an appropriate network topology taking into account network requirement and equipment location.

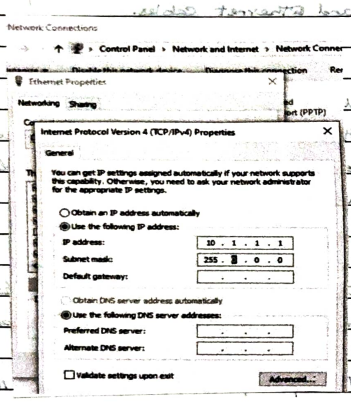

2. Take 4 computers, a Switch with 8, 16 or. 24 ports which is sufficient for network of these sizes and 4 Ethernet Cables.

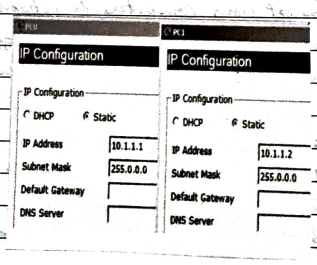

3. Connect your computers to network Switch via an Ethernet Cable, which is as simple as plugging one end of Ethernet into your computer and other end into network Switch.

4. Assign IP address to your PCs.

1. Log on to client computer as Owner
2. Select network and internet connection.
3. Righ click on Local Area Network.

5. Configure a network Switch.
   (i) Connect your Computer to the Switch. To access the Switch's web interface, you will need to connect your computer to Switch.
   (ii) Log into the web interface
   (iii) Configure basic Setting.
   (iv) Assign IP address as 10.1.1.5, Subnet mask 255.0.0.0

6. Check the connectivity between Switch & other machine

7. Select a folder → Properties → Share → Share it with everyone on the Same LAN.

8. Try to access the Shared folders from other Computer.

Result:

Thus the Setup and configuration of LAN using Switch and ethernet has been Studied and implemented Successfully.
