Getting Wire Shark:

1. Wireshark can be downloaded for windows or Macos from its official website.

2. For Lenix, wireshark will be formed into Package repositories.

Packet List Pane:

1. It display all the packets in the current capture file.

2. Each line in the packet list corresponds to one packet in the capture file.

Packet Details Pane:

1. It shows the current packet in a more detailed form.

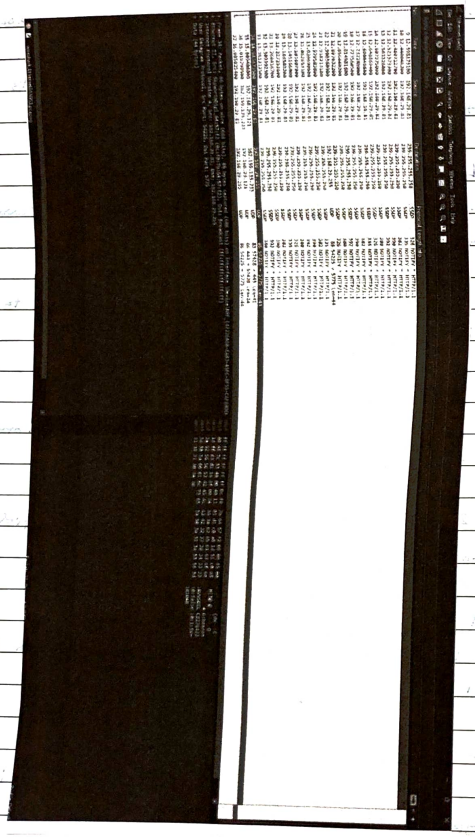

2. It also shows protocols and protocol fields of the Packet selected in the Packet List.

Packet Bytes Pane:

1. It shows the data of the computer in current packet in hexadump style.

Color Coding:

1. Wire Shark uses colors to help you identify the types of traffic at a glance.

2. By default, light purple - TCP traffic, light blue - UDP traffic & black - packets with error.

Procedure:

1. Create a filter to display only TCP/UDP packets, inspect packets and provide the flow graph.

2. Create a filter to display only ARP packets and inspect the packets.

3. Create a filter to display only DNS packets and provide the flow graph.

4. Create a filter to display only HTTP packet and inspect the packets.

5. Create a filter to display only DHCP packet and inspect the packets.

Result:

Thus, the packet capture tool - Like Shark has been implemented and executed successfully.
